Food waste is a huge problem that opens the door to many opportunities for innovation and problem-solving ideas and projects.

The entire landfill is operated by only 3 - 5 people.

The trash the landfill receives comes from Rio Rico, Sonoyta, Tubac, and Patagonia. The trash accepted includes cardboard, plastic bottles, tin cans, water treatment residues, commercial and residential waste, dead animals, newspaper, magazines, office paper, and electronic waste.

By policy, the landfill must destroy everything once it goes into the property.

Besides the fact that they’re incredibly short staffed, most of the projects or possible solutions that could improve the landfill’s situation can’t be achieved due to the lack of materials and funds. As of today, there aren’t enough containers to sustain their current needs.

A landfill is a site for waste disposal that includes the burying, compacting, and covering of such waste with the goal of protecting the environment from contaminants.

In 2021:
- Landfill received 87,808.42 tons of waste
- 24,000 boxes of tomatoes were taken to the landfill
- 20,000 tons of good tomatoes gone to waste

Overall:
- Nogales contributes to 100 daily tons of waste that comes from restaurants, from which 50% is organic waste.
- 400 gallons of diesel used weekly within the landfill
- 4 - 7 trailers arrive daily to the landfill from produce companies

The landfill is regulated by the state and yet it is not funded tax funded. It undergoes inspections and audits by the state to ensure they meet the legal requirements. However, it is a self-sustained business with a staff operated vision.
